Switch⁺⁺ Announces the Release of SimSwitch™ Hardware Ethernet Switch Simulation and Development Environment

Santa Clara, CA (April 1st, 2011) Switch⁺⁺, a leading provider of advanced network switching software solutions announces the availability of a complete simulated hardware Ethernet switch that can replace any existing or future hardware-based switch chipset.

SimSwitch delivers a fully featured hardware-independent switch that can run on your desktop and simulate various hardware behavior and APIs.

“SimSwitch provides companies with unique capabilities which they don’t have today, allowing savings of millions of dollars per year,” Said Avi Gingold, Vice President Sales & Marketing of Switch⁺⁺.

SimSwitch allows developers to simulate large-scale networks and validate their product design on their desktop without major capital investment in networking switches and routers which need to be upgraded or replaced every couple of years.

About Switch⁺⁺

Switch⁺⁺ is a leading provider of network technology software. Switch⁺⁺ flagship products, CoreSwitch and SimSwitch are revolutionary products build on leading edge technology. To learn more, please visit Switch⁺⁺ at www.switchpp.com or call 1-888-321-9606
