**Switch++ Announces the Release of CoreSwitch™ Software Stack and Toolset**

**Santa Clara, CA (Jan 12, 2011)** Switch++ announces the availability of a modular, feature-rich, low cost layer 2+ switching software package that enables network equipment vendors to quickly integrate into their product Ethernet switching capabilities based on the latest silicon technology. CoreSwitch™ software stack includes a full unit and system test framework for the maximum quality and robust switching equipment.

“CoreSwitch™ allows OEMs and Network Equipment Manufacturers (NEM) to easily and rapidly incorporate networking capabilities into their new and existing lines of communication products.” said Amir Fuhrmann, CEO of Switch++. “It greatly simplifies control plane and application development for networking devices. The target markets for the CoreSwitch Software are switching chipset manufacturers and manufacturers developing or enhancing access, enterprise, core, edge, wireless and applications delivery products, such as Video, VoIP, Wireless Backhauling, Ethernet backplane based system, cell phone signaling, power management, etc...”

***About Switch++***

Switch++ is providing leading-edge networking software solutions in the embedded networking software domain. It is committed to become the market leader and innovator in the embedded networking software domain.
